DRTB-HDT

DRTB-HDT (Stratified Host-Directed Therapy for Drug Resistant Tuberculosis)

The project will determine if two adjunctive host-directed therapies can prevent the poor outcomes of treatment in cases of RIF-R TB (rifampicin resistant). Patients with RIF-R TB and other risk factors for poor outcome will participate in a randomised, controlled, three-armed multicentre trial in South Africa, Mozambique, Georgia, Romania, and Moldova.
